PROFESSIONAL SUMMARY

Product-minded engineer with 1.9+ years at Amdocs, converting ambiguous business needs into shipped solutions across 9 international telecom accounts. Partners directly with **product owners** and **clients** to gather **requirements**, scope trade-offs, and drive **releases** from definition through **production support**. Builds side projects end-to-end - from user problem to design to deployment - to practice **product thinking** (StatReads, Cadence). Uses **SQL** and **data analysis** to validate decisions with evidence, not assumptions. Available to join immediately.

SKILLS

Product & Ownership: Requirement Gathering, Product Owner & Client Collaboration, Problem-Solving, End-to-End Ownership, Product Thinking, Usability & User Needs, Decision-Making

Delivery & Support: Agile / Scrum, Release Management, Production Support, Incident Resolution, Root Cause Analysis, Cross-Functional Teamwork, SLA

Data & Analysis: SQL, Data Analysis, Log Analysis, Analytics & Metrics, Root-Cause Investigation

Customer-Facing: Client Onboarding, Product Demos, User Training, Client Communication, First Point of Contact, Excellent Written & Verbal English

Tools & AI: Jira, Confluence, Postman, DBeaver, MobaXterm; AI Tools (Cursor, ChatGPT), Prompt Engineering

Technical: Core Java, REST APIs, JSON / XML, Application Configuration, Debugging, Git, Linux / Unix

Documentation: Runbooks & SOPs, Knowledge-Base Articles, Technical & Product Documentation

PROFESSIONAL EXPERIENCE

Amdocs, Pune, Maharashtra

Associate Software Engineer | Nov 2024 - Jul 2026

Key Accounts: Vodafone (Netherlands, Ireland, Italy, Ukraine), Vivo, PLDT, VEON (Kar-Tel, Unitel), Azercell; plus B2B-Core reusable modules

- Served as **technical point of contact** for 9 international telecom accounts, translating ambiguous **requirements** from **product owners** and **clients** into solutions engineering teams could execute with confidence.
- Cut manual effort and turnaround time for client teams by replacing error-prone, record-by-record processes with **automated bulk operations**, improving accuracy at scale.
- Protected service stability and customer trust as first-line **production support**, resolving 10+ incidents through **root-cause analysis**.
- Reduced rollback risk and enabled smooth go-lives by partnering **cross-functionally** with product, QA, and infrastructure teams to plan and execute **releases** across lower and production environments.
- Informed **client**-facing decisions and drove adoption of delivered features through **SQL**-based **data analysis**, runbooks / knowledge-base documentation, and client demos and training.

PROJECTS

StatReads - Reading Analytics Dashboard | github.com/atandritC/StatReads | atandritc.github.io/StatReads

A client-side web app that turns a StoryGraph / Goodreads CSV export into a visual reading-analytics dashboard covering genre, decade, author, and geographic trends (JavaScript, HTML5 Canvas, Open Library API, Google Books API, Wikidata API)

- Identified that readers had no way to see cross-cutting patterns in their reading history, and shipped 10+ **interactive visualizations** (charts, choropleth map, author grid) covering genre, decade, theme, and geography.
- Increased **trust** in the data by designing a transparent metadata-sourcing table and a **manual override system**, letting **users** see and correct exactly which API supplied each field.
- Maximized metadata coverage by architecting a **layered fallback pipeline** across three public **APIs** (Open Library, Google Books, Wikidata), automatically resolving missing or conflicting data.

Cadence - Project Management REST API | github.com/atandritC/Cadence | cadence-t6ui.onrender.com/swagger-ui.html

A project-management tool for planning work, assigning tasks, and tracking progress (Java, Spring Boot, PostgreSQL, deployed live on the cloud)

- Started from **user needs** - how teams create projects, assign tasks, and track progress - and made **product decisions** about what to model and expose, rather than just implementing endpoints.
- Prioritized **usability** and adoption by documenting the tool with Swagger / OpenAPI and returning clear, consistent errors, so users and developers could understand and use it quickly.
- Made pragmatic **scope** decisions to ship a secure, working product end-to-end - sign-in, core workflows, and a live cloud demo - balancing effort against delivering usable value fast.

EDUCATION

SRM Institute of Science and Technology (SRMIST), Kattankulathur, Tamil Nadu

B.Tech. in Computer Science with Specialization in Information Technology | Aug 2020 - May 2024
